

Capabilities – Inner City

Café Royal – Services Core

Region – England

Height – 41m

Wall Thickness – 250mm

Further Information –

To maximise the programme benefits of steel frame construction slipforming was chosen to construct the RC stair and lift core. The original jumpform programme was halved, gaining over 6 weeks of float in a cost neutral manner.

Due to it's inner city position EHCS designed a number of concrete mixes to mitigate the problems caused by rush hour traffic and disrupted concrete deliveries, ensuring consistent progress.
